The amendment filed April 1, 2005 has been entered and made of record as paper no. 0405.

The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 14, 24, 26, and 27 are rejected under 35 U.S.C. 102(e) as being anticipated by Lowrey (US 6586761 B2).

Lowrey discloses a method of forming a phase-changeable memory device comprising the steps of forming an insulating layer (16), forming a first electrode (14) in the hole in the insulating layer, forming a pattern of a phase-changeable material (18) on the first electrode, and forming a second electrode (26 and 28) on the layer of the phase-changeable material in which portions of the second electrode extend beyond an edge of the pattern of phase-changeable material.

In re claim 24, Lowrey discloses the pattern of the phase changeable material (18) extending beyond the first electrode (14) onto portions of the first insulating layer (16).

In re claim 26, Lowrey discloses in paragraph [0028] that the phase changeable materials are made of Ge, Sb and Te.

In re claim 27, Lowrey discloses in paragraph [0023] and [0031] that the first and second electrodes comprises carbon, and titanium.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 34 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lowrey (6586761 B2) in view of Ha et al (US 2004/0166604 A1).

Lowrey discloses all the subject matter discussed above. However, Lowrey does not disclose the memory cell transistor formed together with the phase-changeable device. Ha discloses in figure 6 that the phase-changeable device can be connected together with a transistor to form a memory cell. Therefore, it would have been obvious to one of ordinary skill in the art to form a transistor in Lowrey's device in order to form a memory cell as taught by Ha.

Claims 15-23, 25 and 28-33 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

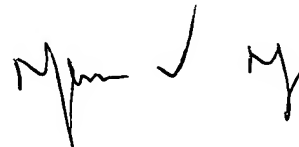

Claims 35-38 are allowed.

The other references are cited to show other structures pertinent to Applicants' disclosure.
